

There will be four types of users:

1. Administrator
2. Teacher
3. Student
4. Guest

The guest will be able to only see the login page, and maybe a default landing page with some information about the given school. (activities)

The administrator will be basically the super user which will be able to manage everything inside the systems, such as adding/deleting/modify the students/teachers/grades. (un cod din carnetul de student / legitimatia profesorului).

The teacher will only be able to manage it's account settings, such as name/email/etc. and also, will be able to manage the students grades. For each new grade, modification of a grade or deletion, the Student will be notified in app about this action.

The student will only be able to manage it's account settings, such as name (this will require a confirmation from the administrator)/password/email/etc. and also will be able to only see it's grades. He will also be able to contest a grade, which means that the Teacher responsible of that grade will be notified about that grade. The notification will only be available inside the app for the first release, email notifications will be added in later versions/releases.

The system will also show (in form of a graph) the students grades.
